Parker is happy to announce Alcius as an automotive wholesaler distributor to provide supply solutions to the mobile market.

Our spring-loaded receiver dryers solve the problem of system failure due to excessive vibration. They are designed for applications in automotive, truck cab, agriculture, construction, recreational vehicle and air conditioning unit manufacturers.

The bulbless expansion valve or block valve provides superheat control via 4-port adaptation to the refrigeration system, eliminating bulb and external equalizer lines. It is proper superheat control regardless of coil pressure drop. They have an anti-hunt power element isolation and are designed with anodized aluminum body and stainless-steel power element.
